Need some tool to classify Flora and Fauna

It should suggest best practices The tool should allow to add new data of species

It should contains most of the existing data of species Will it work without the Internet?

Is it userfriendly Wheather it work on every device

Do i need any training to use the software

Preserve, Restore, and Protect natural habitats

Make observation about organisms and their environment Studies about different species on the planet

> helpers hikers to know about specific species

Belleves Natural forces operate the universe

Fears weather the tool might not able recognize the endangered species Responsible for nature

Excitement with the output of the tool
